More than half the solid waste going to our county-owned Seminole Road Landfill is residential waste that could have been recycled. Recycling helps create green jobs, control rising sanitation costs, and decrease the amount of solid waste going to the Seminole Road Landfill, extending the Landfill’s useful life.

We offer a subscription-based residential single-stream recycling program at no additional cost to residents. The single-stream feature allows for recyclable items to be commingled, and loosely placed in a county-provided recycling container. Due to recent changes in the program’s container options, 18-gallon recycling bins and 40-gallon recycling bags are no longer offered. A standard 35-gallon roll cart replaces the bin and bags, and a larger 65-gallon roll cart upgrade option is also available. Existing subscribers with 18-gallon bins must trade them in for a 35- or 65-gallon roll cart.

Residents can complete the roll cart exchange process online, by email, mail, or in person at the Sanitation Division’s administrative office, 3720 Leroy Scott Drive, Decatur, GA 30032, Monday through Friday, from 7 a.m. – 6 p.m. If necessary, roll cart delivery to residents’ homes is available.

Join over 105,000 households currently subscribed to the program, which represents 60 percent of households within the Sanitation Division’s service area.
What are fats, oils and grease (FOG)?
FOG is composed of the animal and vegetable fats and oils that are used to cook and prepare food.

Where does FOG come from?
- Baking goods
- Food scraps
- Meat fat
- Dairy products
- Butter and margarine
- Sauces
- Cooking oil
- Lard
- Shortening
- Cooking oil
- Lard
- Shortening

What happens when FOG is not properly disposed of?
FOG should be properly disposed of or recycled. It enters the plumbing system through home garbage disposals, kitchen sinks and toilets, coats the interior of pipes, and empties into the county’s sewer system. Sewage overflows are caused by excessive accumulation of FOG in the sewer system, which can result in backups into homes and businesses. These repairs can increase costs for water and sewer services.

Best practices for proper disposal of FOG
Pour cooled fats, oils or grease into a sealable container and throw it in the trash. Do not pour down the sink or toilet.
Scrape plates and cookware before washing. Do not throw scraps of any kind down the sink. Instead, place them in waste containers or garbage bags.
Wipe excess grease from all plates, pots, pans, utensils and surfaces with a paper towel before washing. Throw the greasy paper towels away.

Decomposed grease and other organic materials at the county-owned Seminole Road Landfill are used in the waste-to-energy conversion process at the Landfill’s Green Energy facility. This energy source is used to generate electricity that is sold to Georgia Power and used to provide electrical power to several thousand homes.

Community cleanups are the heart of Keep DeKalb Beautiful. Whether conducted routinely through Adopt-a-Program membership or as part of a specific event by a local group, these organized volunteer efforts greatly enhance the work that we do. These events often foster deeper connections with neighbors as well as a greater sense of community pride. If you are interested in learning more or hosting your own event, please visit keepdekalbbeautiful.org, or contact us today by calling (404) 294-2010 or emailing kdb@dekalbcountyga.gov.
